

Cover Letter

Dear Hiring Manager,

I am excited to apply for the Software Engineer position at your organization. I recently graduated with a Bachelor of Technology in Computer Science and Engineering from Jaypee Institute of Information Technology and have hands-on experience building scalable backend systems, data engineering pipelines, and AI-powered applications.

During my internship at Navikenz, I engineered a multi-source data ingestion framework integrating seven enterprise data sources into Microsoft Fabric Lakehouse. I developed a FastAPI control plane with Azure Key Vault integration, CDC-style upserts, and automated auditing, reducing manual effort by 60% while improving data quality and reliability.

I have also built production-oriented AI systems including FormatIQ, a LangGraph-based multi-agent document automation platform, CareerMatch AI, an LLM-powered resume-to-job matching engine using pgvector and FastAPI, and Sovaria, a distributed Backend-as-a-Service platform.

My technical expertise includes Python, FastAPI, PostgreSQL, Microsoft Fabric, SQL, Docker, LangGraph, RAG, vector databases, REST APIs, and cloud-native backend development. I am eager to contribute these skills while continuing to learn and grow.

Thank you for your time and consideration. I look forward to the opportunity to discuss how I can contribute to your team.

Sincerely,

Mehul Agarwal
