Summary

Data Analyst and Software Engineer Intern with experience in SQL, Python, data validation, analytics dashboards, and ML-integrated systems. Skilled in extracting insights from large datasets, optimizing queries, and building scalable analytical solutions. Strong problem-solving abilities with 700+ DSA problems solved.

Education

Jaypee Institute of Information Technology, Noida

B.Tech in Computer Science and Engineering

2022 – 2026

CGPA: 8.2

Experience

Software Engineer Intern — Navikenz

Machine Learning & Backend Development

Mar 2026 – Present

Noida

Worked on ML-integrated systems to process and analyze large datasets efficiently.
Built backend services and analytical workflows using Python and Node.js.
Collaborated with cross-functional teams to generate actionable insights from data.
Performed API testing, validation, and data quality checks for production systems.

Software Developer Intern — Pristine Business Solutions

Enterprise Systems & Data Validation

May 2025 – July 2025

Noida

Developed automated data validation pipelines improving workflow reliability by 30%.
Optimized complex SQL queries reducing execution time by 40%.
Analyzed datasets and built monitoring tools to detect anomalies and improve accuracy.
Designed validation checks and reporting workflows for enterprise systems.

Projects

Sovaria — Unified Backend Platform

[GitHub](#) [Live](#)

Architected a NoSQL-first unified backend platform integrating database, authentication, authorization, realtime systems, and storage into a single scalable system.

Designed modular backend infrastructure eliminating dependency on fragmented services and reducing integration overhead.
Implemented deterministic data access rules and execution pipelines ensuring predictable behavior and safe schema evolution.
Enabled rapid backend development by abstracting APIs, permissions, and workflows into a unified developer-first architecture.

Tech Stack: NoSQL, Distributed Systems, Backend Architecture, API Design

ShopEase — Inventory Analytics Dashboard

[GitHub](#) [Live](#)

Built analytics dashboards for stock tracking, low-stock alerts, and revenue insights.
Analyzed inventory and transaction data to improve operational decision-making.
Created visual reporting modules for business performance monitoring.
Developed scalable REST APIs using Node.js, Express.js, and MongoDB for real-time inventory management.

Tech Stack: React.js, Node.js, Express.js, MongoDB, SQL

Code Similarity & Plagiarism Detection System

[GitHub](#) [Live](#)

Engineered a plagiarism detection system using AST parsing, tokenization, and control flow analysis to identify structural code similarities.

Processed and analyzed large code datasets to generate similarity insights and rankings.
Optimized multi-file processing pipelines to efficiently compute similarity scores across submissions.
Built an interactive dashboard to visualize and rank suspicious code pairs for easier analysis.

Tech Stack: Python, Flask, SQL, Algorithms

Technical Skills

Languages: Python, SQL, JavaScript, C++

Data Analysis: Pandas, NumPy, Data Cleaning, Data Validation

Visualization: Power BI, Tableau, Matplotlib

Backend: Node.js, Express.js

Databases: MongoDB, MySQL

Core: Data Analytics, REST APIs, Machine Learning Concepts, System Design

Certifications & Tools

SQL for Data Analysis

Python for Data Science

Power BI / Tableau Fundamentals

Achievements

Solved 700+ Data Structures and Algorithms problems on LeetCode and Code360.

Strong analytical and problem-solving skills with focus on optimization and data-driven insights.
